 Each fall we hold multiple flu administration sites throughout the county which are offered to the general public. This year is no exception. The flu is a contagious respiratory illness caused by influenza viruses that infect the nose, throat, and lungs. It can cause mild to severe illness and at times lead to hospitalization and death. The best way to prevent the flu is by getting a flu vaccine each year. No one is naturally immune. The vaccine works along with your immune system to build resistance to the viruses. A flu vaccine is required every year because flu viruses are constantly changing. Everyone 6 months of age and older, including healthy people and people with chronic medical conditions should be vaccination as soon as the vaccine becomes available. No vaccine is 100% effective but it is the first line of defense for flu prevention.

The pneumonia vaccine is recommended for people 65 years of age and older, any adult smoker or asthmatic 19 years of age and older, and also, anyone 2 – 64 years of age with long-term health problems, a disease/condition that lowers the body’s resistance to infection or someone who is taking a drug or treatment that does the same.

SEASONAL FLU VACCINE - $20.00
