

Remember, batteries should never be put in your recycling cart, bucket or bin as they not only are contaminants in the recycling process, but certain rechargeable batteries - lithium batteries, in particular - may combust if damaged and so pose a threat to recycling facilities and staff. Learn about non-recyclable batteries that can be safely disposed in the trash, as well as rechargeable batteries that can be recycled at <https://www.call2recycle.org/>. Rechargeable batteries can be recycled at one of the 30,000 public and private Call2Recycle collection sites located throughout the United States and Canada. Learn more about recycling at recycle.nj.gov.

Remember to safely
manage old batteries
